

AMENDMENTS TO THE CLAIMS

Claims 1-25 were filed originally and were pending at the time of the Office Action.

Claims 1, 10, and 18 are amended.

Claims 1-25 remain pending.

1. (Currently Amended) A method of providing localization of a web service, comprising:

receiving a page request from a requester of the web service;

identifying a localization attribute in a the page request;

identifying a culture associated with the page request:

identifying one or more values associated with the `localization` attribute:

referencing a satellite assembly associated with the identified culture to locate an identifier associated with each value associated with the localization attribute, the satellite assembly being configured to provide content to enable execution by a server of a script embedded in a requested page;

replacing references in the requested page to one or more attributes or values in the page request with content associated with the identifier located in the satellite assembly to provide a culture-dependent response; and

transmitting the culture-dependent response to the requester of the web service.

1 2. (Original) The method as recited in claim 1, wherein the localize
2 attribute further comprises the value “localize”.

3
4 3. (Original) The method as recited in claim 1, wherein the
5 identifying a culture associated with the page request further comprises identifying
6 a culture parameter included with a page request, the culture parameter identifying
7 a culture.

8
9 4. (Original) The method as recited in claim 1, wherein the
10 identifying a culture associated with the page request further comprises identifying
11 values unique to a culture in one or more headers associated with the page request.

12
13 5. (Original) The method as recited in claim 1, wherein the satellite
14 assembly further comprises a dynamically linked library (DLL).

15
16 6. (Original) The method as recited in claim 1, wherein the content
17 associated with the identifier located in the satellite assembly is further comprises
18 content specific to the identified culture.

19
20 7. (Original) The method as recited in claim 1, further comprising
21 referencing a satellite assembly associated with a default culture in the event that a
22 satellite assembly associated with the identified culture is unavailable.

1 8. (Original) The method as recited in claim 7, wherein the default
2 culture further comprises a culture that is predefined to be the default culture.
3

4 9. (Original) The method as recited in claim 7, wherein the default
5 culture further comprises a culture that is a base culture of the identified culture,
6 the identified culture being a culture that is derived from the base culture.
7

8 10. (Currently Amended) A computing-based system for providing
9 localization of a web service, comprising:
10

11 a culture identification module configured to identify a culture associated
with a page request;

12 a localization values parsing module configured to identify a localization
attribute in the page request and identify localization attributes and localization
values associated with the page request;

13 a key values parser configured to locate localized content associated with
the localization attributes and localization values and to designate the localized
content to replace content referenced by the localization attributes and localization
values;
14

15 a satellite assembly associated with the identified culture that includes the
localized content located by the key values parser, the satellite assembly ~~being~~
~~configured_providing the localized content to replace content on a requested page~~
21 to enable a server to execution_execute of a script including the localized content
22 embedded in a the requested page; and
23
24

1 wherein the localized content is associated with the identified culture and is
2 utilized when ~~a-the page requested by the page request~~ is served to an agent
3 making the page request.

4
5 11. (Previously Presented) The computing-based system as recited
6 in claim 10, wherein the satellite assembly associated with the identified culture is
7 further configured to utilize one or more Active Server Pages (ASP.NET)
8 guidelines to locate the localized content.

9
10 12. (Previously Presented) The computing-based system as recited
11 in claim 10, wherein the culture identification module is further configured to
12 identify a culture associated with a page request by identifying a culture identified
13 in a culture parameter contained in the page request.

14
15 13. (Previously Presented) The computing-based system as recited
16 in claim 10, wherein the culture identification module is further configured to
17 identify a culture associated with a page request by identifying values unique to a
18 culture that are contained in one or more headers included in the page request.

19
20 14. (Previously Presented) The computing-based system as recited
21 in claim 10, wherein the localization attribute further comprises the term
22 "localize".

1 15. (Previously Presented) The computing-based system as recited
2 in claim 10, wherein

3 the culture identification module is further configured to determine a
4 default culture in the event that content supporting the identified culture cannot be
5 accessed; and

6 the localized content utilized is associated with the default culture.

7
8 16. (Previously Presented) The computing-based system as recited
9 in claim 15, wherein the default culture is a statically defined culture.

10
11 17. (Previously Presented) The computing-based system as recited
12 in claim 15, wherein the default culture is determined to be a base culture of a
13 specific culture that is derived from the base culture when the identified culture is
14 the specific culture.

15
16 18. (Currently Amended) One or more computer-readable media
17 containing computer-executable instructions that, when executed on a computer,
18 perform the following steps:

19 receiving a page request for web content for a preferred culture;

20 identifying a requested culture from the page request;

21 determining if localized web content corresponding to the preferred culture
22 is available;

23 localizing the web content for the preferred culture if localized web content
24 is available for the preferred culture; and

1 localizing the web content for a default culture if localized web content is
2 not available for the preferred culture, wherein at least one of localizing the web
3 content for the preferred culture and localizing the web content for a default
4 culture includes referencing a satellite assembly to ~~leate~~provide a localized
5 content associated with at least one of the preferred culture and the default culture,
6 the satellite assembly being configured to provide the localized content to enable
7 the computer execution of to execute a script embedded in a requested page with
8 the provided localized content.

9

10 19. (Original) The one or more computer-readable media recited in
11 claim 18, further comprising determining the default culture to be a predefined
12 default culture.

13

14 20. (Original) The one or more computer-readable media recited in
15 claim 18, further comprising determining the default culture to be a base culture
16 from which the preferred culture is derived.

17

18 21. (Original) The one or more computer-readable media recited in
19 claim 18, wherein the determining if localized web content corresponding to the
20 preferred culture is available further comprises determining if a satellite assembly
21 associated with the preferred culture is accessible.

22

23 22. (Original) The one or more computer-readable media recited in
24 claim 18, wherein the localizing the web content further comprises:

25 identifying a localization attribute included in the page request;

1 identifying key values and key attributes associated with the localization
2 attribute; and

3 redirecting key values and key attributes to reference the localized web
4 content.

5
6 23. (Original) The one or more computer-readable media recited in
7 claim 22, wherein the localization attribute further comprises the term “localize”.

8
9 24. (Original) The one or more computer-readable media recited in
10 claim 18, wherein the identifying a requested culture from the page request further
11 comprises recognizing a culture parameter in the page request.

12
13 25. (Original) The one or more computer-readable media recited in
14 claim 18, wherein the identifying a requested culture from the page request further
15 comprises recognizing one or more culture-identifying values from one or more
16 headers associated with the page request.
